Automatic Block Signals (Niland to Yuma)

Westward trains are superior to trains of the same class in the opposite direction.

*Leaving time Patio No. 105, 12:07 a. m.; No. 1, 1:31 a. m.; No. 3, 5:40 a. m.; No. 109, 11:16 a. m.; No. 101, 1:35 p. m. (Pacific Time).

Time given in train orders Yuma will be at Lead Switch, Second Street.

Trains, except First Class, moving from Yuma to Patio not pass Lead Switch near Second Street without signal from yard man.

Nos. 1, 3, 109 and 101 stop all stations on signal to discharge passengers from El Paso and East.

CLEARANCES.

1. Rule 83-A not apply stations not telegraph offices, or where offices closed.

2. Trains must obtain clearance card as follows:

All at Patio, Niland, Colton.

3. All branch trains at Redlands Junction, Redlands, West Anaheim, San Pedro, Duarte, and trains of the Van Nuys and Santa Paula lines at Burbank, Chatsworth, Montalvo and Saugus, when telegrapher on duty.

REGISTER EXCEPTIONS.

4. First-class trains register by Form 2642 at River Station and Burbank Jct.

5. First class trains, having authority to proceed by rule or train order, will register by Form 2642 at Colton.

6. Beaumont is a registering station only for extra trains originating at that point. Regular trains will leave a registering ticket (Form 2642) with the operator at Beaumont, who will enter same on the register for the information of such extra trains originating and this register will not apply on other trains.

7. After having been shown on register at Los Angeles, River Station or Colton, signals for sections will not be taken down at, or displayed from any intermediate station between those points.

8. Only trains originating and terminating register at Oxnard and Los Angeles.

9. Only trains to and from branch and trains originating and terminating register at Ventura Junction, Montalvo, Chatsworth, Shorb, Bassett, Pomona, Ontario, Redlands Junction.

10. At registering stations on single track, or at the end of double track when passing from single to double track, where trains are permitted to register by ticket (Form 2642), as per Rule 83-B, conductors and telegraphers, or telephone operators, must comply with Rule 96, the same as at non-registering stations.

11a. Train register is maintained at Yard Office at Santa Barbara, also at Passenger Station Santa Barbara.

b. The Yard Office at Santa Barbara will be considered the initial station for both Divisions except that westward first-class trains holding Los Angeles Division order to display signals to Santa Barbara must display them to the Passenger Station.

c. Eastward first-class trains holding Coast Division order to display signals to Santa Barbara must display them to the Yard Office and under no circumstances must they be taken down at west end of double track or between that point and the Yard Office.

d. Only first-class trains will register at the Passenger Station for the information of eastward first-class trains of the Los Angeles Division and for westward inferior trains of the Coast Division to check against eastward first-class trains of the Coast Division that do not appear on the Coast Division register at the Yard Office to avoid making an observation check on double track, also to check against all westward first-class trains of the Coast Division.

e. First-class trains will register by ticket (Form 2642) at the Yard Office. Eastward first-class trains of the Los Angeles Division will accept the registration of westward first-class trains as they appear on the Passenger Station register, as applying at the Yard Office, but must check at Yard Office against over due first-class westward trains not on the register at the Passenger Station.

f. Single track Rule 14 (k) will apply to the double track between East and West Santa Barbara. First-class trains being permitted to register at Yard Office by Form 2642 as per Rule 83 (b) conductors, telegraphers or telephone operators must comply with Rule 96, the same as at non-registering stations.

g. Conductors and engineers of eastward first-class trains will obtain by telephone necessary information from the telegraph operator to enable them to properly indicate the identity of their train before leaving Passenger Station. Telegrapher at the Yard Office will furnish conductors and engineers of westward first-class trains all orders, clearance and special instructions governing movement of such trains west of Passenger Station on the Coast Division. Engineers will deliver such orders and special instructions to Coast Division engineers.

h. The clerk at Passenger Station will advise telegrapher in Yard Office the arriving time and departing time of all first-class trains in addition to other information shown on the register at Passenger Station. Conductors must show the same information on Form 2642 at Yard Office as shown on register at the Passenger Station. The telegrapher at Yard Office must see that trains for the Coast Division and Los Angeles Division are registered in their respective registers.

TRAIN AND AIR INSPECTION.

12. No freight train run more than 30 miles without stop for inspection of wheels, running gear, etc.

13. Air brakes of all freight trains must be tested from rear at Beaumont, as per Rule 17, and on all passenger trains on which air brake hose have been separated.

14. Eastward freight trains stop at Cabazon, Palm Springs, Edom, and westward freight trains at Ordway, 10 minutes, where trainmen will make careful examination of wheels under all cars.

15. Engines running light, descending grades of 1½ per cent and over, will stop for inspection sufficient length of time for the engineman to satisfy himself that tires and machinery are in satisfactory condition.

16. Engines of freight trains cut off to take water when more than 20 cars.

17. Maximum tonnage rating per operative brake 125 Ms between Colton and Palm Springs must be strictly observed.

18. Conductor will report to Superintendent, by wire, any failure to properly control train by air brakes and will deliver to Car Inspector at first terminal, list showing tonnage of each car in train. Car Inspector will record on list the piston travel of each car in train, as shown by test made before road engine is cut off, also result of three-minute test of all retainers. The list will then be forwarded to Superintendent by first mail.

19. Swing Brakeman will ride on top near middle of train between the following points:

Eastward: Los Angeles to Bassett,
Beaumont to Indio,
Bloomington to Colton,
Knob to Yuma.
Westward: Beaumont to Colton,
Shorb to Los Angeles,
Pomona to Puente.

20a. Freight trains taking siding where it is necessary for them to open their own switch, also freight trains leaving siding where it has been found necessary to apply train (automatic) brakes after out on main track, must be brought to a stop and sufficient time allowed to insure release of all brakes in train before an attempt is made to start. One or one and one-half minutes generally is required to insure such release; engineer must be governed by gauge as well as time duration in this work.

b. Practice that has governed in the past in handling freight trains on siding, between switches, will be permitted in future.

c. Where train (automatic) brakes have been applied for any cause and speed reduced to as low as fifteen miles per hour, except in grade work where average speed is fifteen miles or lower, stop should also be made and time duration as outlined above recognized before attempt is made to start.

d. Where undersirable action of brake is noticed, engineer must place handle of brake valve in lap position and allow train to come to stop, employing the same means to insure all brakes releasing before attempt is made to start again.

e. Special attention of trainmen must be given in these instances to see that all brakes on rear end of train have released.

21. The following additional air whistle communicating signals will be used: One long, when running, look back for hand signals.

Six short, when running, increase steam heat.

Method for Testing for Triple, Causing Undesired Application of Air Brakes (dynamiter).

22a. If test is made on grade, a sufficient number of hand brakes must be set to secure train.

b. The brake pipe must be fully charged and brake valve kept in running or release position according to the type of brake or valve. Westinghouse in running position and New York in release position.

c. Trainmen will then, starting from rear, station themselves so as to observe two cars apiece. The angle cock ahead of the cars being tested will then be closed and angle cock on rear of caboose opened very slowly, allowing a small flow of air, about the same as would be made from brake valve for a service application. If all brakes apply properly and show no bad triple action, close angle cock on rear of caboose.

d. The above procedure is to be followed throughout the train, first separating the hose between the forward car of the cut, already tested, and the rear car of the cut to be tested and closing the angle cock at the forward end of the leading car of the cut—the number of cars in each test depending upon the number of trainmen available, not to exceed two cars for each man. Air brake of car going into emergency will be cut out and report rendered on Form 2809.

e. After test is completed, and before train proceeds, rear end air brake test, as per Rule 17, must be made to insure all hose coupled and angle cocks in proper position.

USE OF RETAINERS.

23. Passenger trains descending grades between Redlands Jct. and Palm Springs retainers will be turned up on all cars.

24. Freight trains consisting of all loads descending grades between Colton and Edom, turn up all retaining valves, also on equalizers when used.

25. On freight trains consisting of loads and empties, turn up retaining valves on all loads and every other one on empties. On freight trains consisting of all empties, turn up every second retaining valve throughout the train.

26. Where retainers used speed of freight trains on any grade over one per cent not exceed 25 miles per hour, and on grades this character more than 5 miles long, for first 5 miles time consumed in traveling any one mile not less than 3 minutes. Above maximum speed restriction not affect speed on heavy grades or other locations where maximum now provided.

27. Retainers will be used on all eastward freight trains between San Fernando and Burbank, composed of over 30 cars or 100 Ms per operative brake.

"19" ORDER.

28a. Within automatic block signal limits between Saugus and Indio—Santa Barbara and Burbank—Niland and Yuma—San Bernardino and Riverside—note under Rule 211 modified as follows:

b. Form "19" train order may be issued to restrict superiority of train, except that Form 31 must be used (1) when orders delivered at non-telegraph or closed telegraph station. (See Rule 217.) (2) When necessary to restrict train which has been cleared or engine of which has passed train order signal. (See Rule 219.) (3) When issuing order Form "G," example 3. (4) When giving any train right over all trains. (5) When reducing time order where necessary dispatcher have signature superior trains before completing order to inferior trains.

c. Operator will fill out clearance, designating thereon numbers all orders (Forms 19 and 31), repeat to dispatcher train and order numbers as they appear on clearance and obtain O. K. with time and Superintendent's initials, writing same before delivery in space provided for. Operator retain carbon copy clearance.

d. Dispatcher write train and order numbers in train order book as transmitted by operator from clearance, and designate time clearance made O. K., not transmitting O. K. unless operator repeats numbers all orders to be delivered to train to which clearance addressed.

e. When "19" order restricting superiority issued at station where superiority restricted, train must be stopped by operator before delivery of order.

f. Conductor's and engineer's attention called to importance of approaching moderate rate speed telegraph offices where orders received. Also necessity carefully checking clearance to ascertain positively clearance properly addressed and orders received those called for by clearance.

g. Clearance outside automatic block signal limits must show numbers all orders (both 31 and 19) and be O. K.'d by dispatcher same as within block signal limits.

TRANSMITTING TRAIN ORDERS BY TELEPHONE.

29. Rule 251 is amended to read as follows:

In transmitting train orders by telephone, the names of stations must be plainly pronounced, and then spelled letter by letter, thus: Aurora, A-u-r-o-r-a; all numerals must first be pronounced, and then followed by spelling, thus: 1-0-5, O-n-e N-a-u-g-h-t F-i-v-e. The train dispatcher must write the order as he transmits it and underscore it as it is being repeated. The letters duplicating names of stations and numerals will not be written in the order book nor upon train orders.

AUTOMATIC SIGNALS.

30. Automatic block signals in operation between Santa Barbara and Burbank Jct., Saugus and River Station, River Station and Naud Junction, Naud Junction and Mission Junction, on westward track only, River Station and Mission Junction, Los Angeles Shop and East yard limit Indio, on Covina Branch one mile west of Pomona, between Yuma and Niland, between San Bernardino and Riverside.

31a. Rule 504 is amended as follows:

When a train is stopped by block signal, it may proceed when the signal indicates proceed.

b. ON SINGLE TRACK: Send a flagman in advance immediately, wait at least five minutes after the flagman has started, and then follow the flagman to the next distant or home block signal in proceed position, or if the next distant or home block signal in advance is in plain view and in proceed position and track ahead is seen to be clear, proceed under control, not exceeding six miles per hour. Flagman need precede train only to a point where the track ahead is seen to be clear to the next distant or home block signal in proceed position, but trains will not exceed six miles per hour to such block signal.

c. ON DOUBLE TRACK: A train may proceed immediately, running under control, not exceeding six miles per hour, to the next distant or home block signal in advance, except that a flagman must precede the train when view is obscured by weather conditions, tunnels, or other obstructions.

d. A train stopped at home signal on account of opposing train which can be seen taking siding, may immediately proceed at speed not exceeding six miles per hour, to fouling point, providing track is seen to be clear to the fouling point.

e. When a train which is to take siding is stopped by home signal at meeting point at which opposing train is standing on the main track, it may proceed immediately, under control, not exceeding six miles per hour, to the entering switch provided track is seen to be clear to that switch.

f. When a train which is to take siding at meeting or passing point or is to enter terminal yard finds home signal other than interlocking signal in stop position on account of train to be met or passed standing on the main track, or on account of switch being lined up for receiving track, it may pass the home signal without stopping, when a trainman or switch tender is at the home signal giving proceed signal to indicate that switch is open, and may enter siding or receiving track at speed not exceeding six miles per hour, provided switch is seen to be open and track clear to fouling point of switch.

g. When the number plate of a home block signal is reversed, showing "yellow," and signal indicates "Stop," train may pass without stopping, but, unless otherwise directed by train order or bulletin, will proceed with caution to the next signal.

h. When light is not burning in a distant or home block signal, speed must be reduced sufficiently to enable engineman to be governed by the position of the signal blade, and to observe the number of the signal, which will be reported as having light not burning from the first train order office from which report can be made without delay to train.

i. Flagman preceding a train stopped by a block signal will watch carefully for broken rails or other defects of track, and when trains are authorized to proceed at six miles per hour without a flagman in advance, both engineman and fireman will watch carefully for such defects.

j. Within block signal limits that portion of Rules 86 and D-86 reading "but must be clear at the time a first-class train in the same direction is due to leave the next station in the rear where time is shown" is cancelled.

k. Overlaps affecting eastward trains—Shorb, Alhambra, San Gabriel and Savanna. Trains in direction indicated holding main track against opposing trains must not pass post marking overlap of adjoining block, and switch must not be opened to head in opposing trains into siding until it is known that expected train has passed signal at opposite end of block.

32. Control for tower signals on eastward and westward tracks Glendale Tower and eastward track at Burbank Jct., extend beyond the limits of the interlocking and are held at stop by open switch or train on main track in same manner as automatic signals. These signals held at stop regardless of towerman's efforts if main track is occupied or switch open.

33. Distant switch signals operated east and west end Piru, east end Camulos and east of East switch Castaic. These signals set at "caution" by open switch or train on main track between signal and switch or by train fouling main track.

34. Automatic block signals—3895 Ventura—4026 Montalvo—4500 and 4513 Saugus—5145 Pomona—5209 Ontario—5399 and 5396 Colton—5440 Redlands Junction for trains going to Redlands Branch—6100, 6110, 6111, 6115, 6116, 6121 Indio—6668, 6672, 6673, 6676, 6677, 6681 Niland, governing movement of trains entering yards are minute signals. If signals are stop position wait one minute, then proceed under control, not exceeding 6 miles per hour.

35. Short arm on signal 5629 east end Beaumont siding governs trains entering siding. If arm does not clear when switch thrown train may proceed under flag through siding.

36. Trains arriving Montalvo from Santa Paula Branch, finding home signal No. 4031 at stop, before fouling the main track, will be governed by Rule 504, and in addition will send a flagman down the main track eastward in the direction of Oxnard, who will be governed as per Rule 99.

INTERLOCKING TOWERS.

37. For any movement against the current of traffic give one long and one short sound of steam whistle. When train, which has been given interlocking signal at any crossing, does not wish to use crossing, give one short followed by one long sound of steam whistle for the information of towerman.

38. Switch at end of double track Shorb electrically controlled and operated from telegraph office. Crossover switches west of double track switch between the two main tracks, and westward main track and middle track electrically lock when an approaching westward train enters the block. Switching movements through these crossovers can be made only by leaving train east of westward home signal at end of double track.

When fixed signals at end of double track Shorb are inoperative, be governed by Rules 630, 631 and 663.

Main Track.

39. **Raymer Tower.**—Crossing of Pacific Electric Railway, 0.9 mile east of Raymer.

40. **Burbank Junction Tower.**—Three-arm home and distant signal is located five hundred (500) feet East of Tower on Westward main track and top arm covers movement straight through on Westward main track to Saugus. Lower arm governs movement through crossover to Coast Line.

Westward trains approaching Interlocking Plant give one long sound (———) of whistle for top arm and one long and four short (——— o o o o) sounds of whistle for lower arm.

Three-arm home and distant signal is located eight hundred (800) feet west of Tower on Coast main track and top arm governs movement through on Eastward main track. Lower arm governs movement through crossover to Westward main track against current of traffic.

Eastward trains approaching Interlocking Plant from Coast Line give one long sound (———) of whistle for movement straight through Eastward main track and one long and one short sound (——— o) of whistle for lower arm.

Three-arm home and distant signal is located five hundred feet west of Tower on Saugus line and top arm governs movement through crossover to Eastward main track. Lower arm governs movement to Westward main track against current of traffic.

Eastward train approaching Interlocking Plant from Saugus give one long (———) sound of whistle for top arm and one long and one short (——— o) sound of whistle for lower arm.

Dwarf signal located five hundred feet east of Tower on Eastward main track governs movements against current of traffic. Give one long and one short (——— o) sound of whistle for this signal.

41. **Glendale Tower.**—Crossing of Pacific Electric Railway, 0.2 mile east of Glendale (Tropico).

42. **El Monte Tower.**—Crossing of P. E. Ry. 0.1 mile east of El Monte. To or from east end of siding, five short.

43. **Pomona Tower:**

For Chino or Covina Branch, one long, four short.
For Siding, five short.
For Storage Track and Winery Spur, two long, one short.
For House Track, one long, one short, one long.
Chino Branch to Main track one long.
Main Track, one long.

44. **Bloomington Tower.**—Crossing Pacific Electric Railway at Bloomington. To and from east end siding, five short. For house track or packing house spur, two long and one short.

45. **Colton Tower.**—Crossing of A. T. & S. F. Railway, west end Colton yard. Eastward trains for coach track, five short; for No. 1 track, one long and four short; for No. 2 track, one long, one short and one long; for Riverside Branch, two long and one short.

San Bernardino-Riverside Branch.

46. **E Street Tower.**—Crossing of A. T. & S. F. Ry., at San Bernardino. To go around Y one long and one short; for house track, two long and one short. For P. E. track one long and four short.

47. **Highgrove Tower.**—Crossing of A. T. & S. F. Railway, 0.7 mile west of Orange Center.

48. **Riverside Tower.**—Crossing of L. A. & S. L. Ry., at Riverside Junction. To Riverside freight yard one long and four short. From or to L. A. & S. L. Ry. one long and one short.

Santa Ana Branch.

49. **Cudahy Tower.**—Crossing L. A. & S. L. Ry. at Cudahy.

San Pedro Branch.

50. **Nadeau Tower.**—Crossing A. T. & S. F. Railway, 0.9 mile east of Vernondale.

51. **Dominguez Tower.**—Crossing Pacific Electric Railway 1.5 miles west of Elftman.

52. **San Pedro Drawbridge Tower.**—Governing movement of trains over drawbridge one mile west of San Pedro.

Whittier Branch.

53. **Los Nietos Tower.**—Crossing A. T. & S. F. Ry. at Los Nietos. For siding, five short.

Tustin Branch.

54. **Anaheim Tower.**—Crossing A. T. & S. F. Ry., 0.5 mile east of Tustin Junction.

55. **Olive Tower.**—Crossing A. T. & S. F. Railway, 0.3 mile east of Marlboro.

Pasadena Branch.

56. **Marengo Tower.**—Crossing of Pacific Electric Railway on Pasadena Branch 0.2 mile west of South Pasadena.

Duarte Branch.

57. **Arcadia Tower.**—Crossing A. T. & S. F. Ry. 1 mile east of Arcadia.

Chino Branch.

58. **Pomona Jct. Tower.**—Crossing L. A. & S. L. Ry., 1.1 miles east of Pomona. For Packing House Track, one long and four short.

59. **Ontario Tower.**—Crossing L. A. & S. L. Ry., 0.2 mile west of Ontario.

Los Angeles Yard.

60. **Mission Tower**—Crossing A. T. & S. F. and L. A. & S. L. Railways, 1.9 miles east of Los Angeles, or 0.7 mile east of River Station.

Main Track to Passenger Station, one long.
Main Track east, one long.
To River Station, one long, four short.
To Roundhouse, one long, four short.
To Brewery Spur, two long, one short.
To Salt Lake Transfer, four short, one long.
To Outbound Roundhouse Track, one long, one short, one long.
To Pacific Coast Packing Co., one long, one short, one long.
To Pressed Brick Spur, two short, one long, one short.
To Barber Asphalt, one short, one long, one short.
To Lacy Manufacturing Co., two long, one short.

All movements against the current of traffic, one long, one short, except to River Station against the current of traffic, five short.

61. **River Station Tower.**—One long for main track; five short for Yuma or Yard lead; one long, one short and one long for Hotel track or New House; one long and four short for Platform or EO tracks; one long and one short for movements against traffic, except toward Mission Junction, four short and one long.

62. **Naud Junction Tower.**—Trains running via Mission Junction, four short.

63. **Clement Junction Tower Crossing P. E. Ry.**—To go on Pacific Electric transfer or to Hamond Lumber Co., one long and four short; on Tenoni spur, one long, one short, one long.

STAFF SYSTEM.

64. **Covina Branch**—Between Lone Hill, San Dimas, La Verne and Ganesha Junction.

65. **Smeltzer Branch.**—Between Huntington Beach and La Bolsa.

66. Possession of staff is authority for train to proceed to next staff.

67. Trains unable to secure staff from staff machine will, after waiting 5 minutes, send flagman ahead and after waiting 5 additional minutes, follow flagman to next staff machine. Failure of staff machine to be reported to Chief Dispatcher from first open telegraph station.

LIGHT SYSTEM.

68a. Between Gamewell and a point 1840 feet east, 1840 feet of P. E. track will be operated over by the S. P. trains jointly with the P. E. Operation over this 1840 feet of track is controlled by a manually operated light-signal system. The light-signal consists of 3 red lamps located about 15 feet above ground on pole between S. P. and P. E. tracks at clearance point; these lights burning in series with red lamp enclosed within a box, the door of this box being equipped with a red bullseye, which reflects the rays of red lamp after door is closed and locked. All trains will stop at the clearing point. The normal indication of signal is dark.

b. To operate, open the box, and throw the switch lever. Display of red lamp in box and one side of pole is authority to proceed. The track switch should not be opened until after the proper indication has been received from the light signal.

c. When light circuits are turned on at both ends simultaneously or the block is occupied, there will be no light indication.

d. Should you fail to get the proper indication on account of defective light, conductor will endeavor to get in touch with P. E. dispatcher. Failing to get in touch with dispatcher, send a flagman in advance sufficient distance to insure full protection, then proceed.

e. After clearing the joint track, throw the switch in the box, thereby restoring the signal to normal position. The operation of the light switch will be done by the conductor. Engineers must know proper indication is shown in the signal before proceeding beyond the clearing point.

SPEED TABLE.

Speed per Hour	1 Mile in Min. Sec.	Speed per Hour	1 Mile in Min. Sec.	Speed per Hour	1 Mile in Min. Sec.	Speed per Hour	1 Mile in Min. Sec.
6	10	21	2.51	31	1.56	41	1.27
8	7.30	22	2.43	32	1.52	42	1.25
10	6	23	2.36	33	1.49	43	1.23
12	5	24	2.30	34	1.45	44	1.21
15	4	25	2.24	35	1.42	45	1.20
16	3.45	26	2.18	36	1.40	46	1.18
17	3.31	27	2.13	37	1.37	47	1.16
18	3.20	28	2.8	38	1.34	48	1.15
19	3.9	29	2.4	39	1.33	49	1.13
20	3	30	2	40	1.30	50	1.12

MAXIMUM SPEED FOR WHICH LOCOMOTIVES ARE COUNTERBALANCED.

All Locomotives, with the following exceptions, are Counterbalanced for a speed in miles per hour equal to the number of inches in diameter of driving wheels:

Class of Locomotive	Engine Numbers	Maximum Speed in Miles per Hour	Maximum Wheel Pressure
A-1	3000 to 3309	63	45120 lbs.
A-2	3022	64	44500 “
MC-1	4000 and 4001	53	42760 “
MC-2	4002 to 4016	53	42760 “
MC-4	4017 to 4028	53	43130 “
MC-6	4029 to 4043	53	43230 “
MC-6	4044 to 4048	53	42680 “
MK-2	3200 to 3202, 3205, 3206, 3210, 3211	49	46140 “
MK-4	3216 to 3230, 3232 to 3235	49	45560 “
MM-2	4200 to 4211	56	46300 “
T-6	2187, 2190, 2194, 2200, 2203, 2204, 2205	50	22740 “
T-6	2197, 2208	45	24110 “
T-28	2311 to 2314, 2316, 2317, 2320, 2323, 2325, 2327, 2328, 2330, 2342, 2343, 2352	54	46220 “
TW-2	2946, 2948 to 2953	43	25860 “
TW-4	2926 to 2931	44	26000 “

Note.—Maximum speed in miles per hour is based on vertical disturbing force of Counterbalance not exceeding 75 per cent of static wheel load, and maximum wheel pressures shown obtain at speeds indicated.

Above table for information of engineers must not be considered in any way to authorize exceeding speed limit specified under "speed restrictions."

69. SPEED RESTRICTIONS.

MAXIMUM SPEEDS IN MILES PER HOUR AS FOLLOWS.

	M. P. H.
Passenger trains	50
Freight trains and all light engines running ahead	35
Yard engines	20
2-10-2 class in passenger service	40

New 2-10-2 class engines must under no circumstances be used in passenger service.

	M. P. H.
2900 class, 4200 class—in passenger service	40
4000 class—in passenger service	35
Freight consolidation—in passenger service	45
Freight Mikado in passenger service	45
Engines backing coupled in trains or light on main track	25
Branches	20
Trains handling relief outfit on main track, Imperial and San Pedro branches	25
Branches (except San Pedro and Imperial)	15

Mikado engines must not exceed 30 miles per hour between Calexico and Niland.

The following restrictions indicated by slow boards placed ¼ mile from point of restriction.

70. Where ground is soft, speed should be 10 miles per hour or less.

71. Engines on westward passenger trains stop east of Colorado River bridge.

72. Atlantic and Pacific type or eight-wheel engines over 75,000 lbs. on drivers; ten-wheel engines over 100,000 lbs. on drivers, mogul engines over 126,000 lbs. on drivers; twelve-wheel or consolidation type engines over 125,000 lbs. on drivers, and cars gross load over 154,000 lbs. are restricted from operating over bridges 401-L and 405-B on the Ojai Branch.

73. All our standard railway equipment is permitted to operate over Mill Creek bridge just west of Redlands with the exception of Mikado, Mallet and 2-10-2 type locomotives.

74. Passenger trains not exceed 35 miles per hour and freight trains 20 miles per hour over any steam or electric crossing movement over which is controlled by interlocking signals.

75. When necessary to move cars ahead of engine, do not exceed 20 miles per hour.

76. When entering or leaving sidings, or moving while on sidings, do so under control not exceeding a speed of eight (8) miles per hour. Responsibility for collision on siding placed with moving train.

77. Train or portion of train, entering siding will pull into clear of main track before stopping. Light engines must not stop between main track and derail switch for purpose of lining up one switch before other switch is opened. Trains passing from siding to main track will not start until derailer and main track switches are both open. When backing out of sidings to the main track where such is equipped with block signals, train will back clear of the home signal and if the signal does not go to clear will be governed by Rule 504.

78. When engineer's judgment, track protected by slow order safe for higher speed than slow order, engineer notify conductor, stating speed considered safe, conductor notify Superintendent from first open telegraph office.

79. Yellow flags and lamps or slowboards will be placed one-fourth mile each side of structures or pieces of track over which speed of trains must not exceed fifteen miles per hour or rate of speed specified by bulletins, train orders, or slowboards.

MAIN TRACK LINE-UP AT JUNCTIONS.

80. Montalvo switch set and locked for Santa Barbara-Oxnard main track.

81. Stanton Jct., west switch of wye set and locked for Smeltzer Branch.

LOCATION OF OVERHEAD STRUCTURES LESS THAN 22 FEET ABOVE TOP OF RAIL.

83. CROSSINGS WITH ELECTRIC RAILWAYS WHERE S. P. DOES NOT HAVE RIGHT OF WAY.

Los Angeles Railway on Second St., crossing Davies Spur.
Los Angeles Railway on Central Ave., crossing Bernard Spur.
Los Angeles Railway on Mateo St., crossing Lead east end New Coach Yard.
P. E. Railway, between Thenard and Long Beach.

Pacific Electric Railway has prior right over crossing on spur track leading to Griffith Lumber Company's yard at Santa Ana. Movement over this crossing must not be made without first stopping before fouling crossing and observing whether Pacific Electric cars approaching.

Salt Lake Railroad has prior right over Old Chino Branch crossing Ontario. Southern Pacific trains will stop before fouling crossing, observe whether or not Salt Lake trains are approaching. Salt Lake trains will not stop before fouling the crossing.

Trains stop before fouling Pacific Electric Ry. crossing one-tenth mile east of Baldwin Park.

MISCELLANEOUS.

84. Rules 93 and D93 are revised as follows: Within yard limits the main track may be used, protecting against first-class trains. All trains must approach yard limits and pass through yards under control.

85. Shoving on wooden frame cabooses or light equipment in trains such as wooden frame flats, outfit cars, etc., not allowed.

86. When doubling, engine running for water, or for any other purpose, it becomes necessary to leave a portion of a train on the main track, a red flag by day and a red light by night must be placed on the head car of the standing cut of cars, and in addition two torpedoes placed not less than one-fourth mile in advance thereof. Enginemen must know the location of cars thus left standing and must use extreme care in returning for rear portion of train.

87. Helpers must not be cut off or coupled on while train is in motion. Train must not be split ahead of helpers while train is in motion letting rear portion of train trail leading portion to point where helper is to be cut out; the only exception to this rule being where yard engine cuts off from westward trains west of Colton.

88. Cars must not be cut off while in motion at Redlands and Crafton.

89. All trains must be preceded by flagman when crossing Foothill Boulevard just east of Duarte Station.

90. All trains must stop and be preceded by a flagman before passing over Los Angeles Street, Anaheim.

91. Display headlight and marker lights while passing through Tunnels 25 and 26.

92a. When a helper engine is to be coupled into a train copies of all orders affecting movement of the train at or beyond point from which helper is to be used must be delivered to each helper engine crew before leaving the point at which coupled into train.

b. If helper engine is picked up at a closed or non-telegraph office a copy of order affecting movement of train at or beyond that station—and copy of clearance card—must be delivered to conductor of train at a preceding open telegraph office for delivery to the helper engineer before leaving station at which cut in.

93. Trains receiving orders to run extra between Santa Barbara and Los Angeles, Colton and Los Angeles in either direction, will consider such movements via the main track, and not via Chino, Covina or Van Nuys unless order so states.

94. When one torpedo is exploded, train must come to a stop as per Rule 15. If no person is at hand to explain the placing of the torpedo, train may proceed as hereinafter provided:

(a) If view is obscured in any manner, flagman must be sent ahead for a distance of at least one-half mile.

(b) If track is seen to be clear (or within automatic block limits), if signals indicate "proceed" trains may proceed under control for a distance of one-half mile before resuming full speed.

95. When train encounters a red light or red flag unattended they will protect to the rear and flag ahead one-half mile.

96. When two or more main tracks are involved, unattended red or yellow signals will be placed on right hand side of track direction bound.

97. On double track lines, trains encountering fusee burning red will stop, then proceed cautiously, not exceeding six (6) miles per hour, to the obstructions or until clear signal is reached, or track is known to be clear.

It will not be necessary to wait until red fusee has burned out.

98. When necessary for trackmen to place protection flags or lights on track between Grand Terrace and San Bernardino, which parallels the Pacific Electric, said flags or lights will be placed on the east side of the S. P. track and Pacific Electric will be asked to place their signals on west side of Pacific Electric track. This is to avoid signals between the tracks, confusing employees both lines.

YARDS.

99. Yards are established at following stations: Santa Barbara, Oxnard, Los Angeles, San Pedro, Pomona, Covina, Chino, Colton, Beaumont, Indio, Niland, El Centro, Calexico.

100. Trains and switching movements over 7th and 8th Sts., also Orange Ave., Riverside, must be made only after flagman has taken position on crossing.

101. Eastward freight trains entering River Station yard stop clear of east lead to new class yard and proceed only on signal from switch tender.

102. When first-class trains meet at Indio westward train hold main track. Eastward train take siding through crossover just west of station.

103. Trains entering Los Angeles Passenger Station not pass Fourth Street until receive signal from switch tender.

104. Trains to and from Santa Paula Branch enter and leave main track through switch just east of water tank Saugus.

105. Trains to and from Chino Branch enter and leave main track through switch just east of station, Ontario.

106. Trains to and from Imperial Branch enter and leave main track through switch just west of station, Niland.

107. That part of Chino Branch main track between the initial switch at Pomona Jct. and Pomona Depot will be used as a siding over which all trains must move under control expecting to find same occupied, except first-class time table trains to and from Chino Branch must have preference over this track without delay.

108. West end Covina Branch line, Bassett, will end at Branch main track derailing switch near water tank.

109a. In order to clear up any misunderstanding existing with reference to division of work at Los Angeles in connection with securing trains on arrival, the following will obtain:

b. On trains arriving from Shorb or Florence, brakeman will cut off engine, except when the length of the train exceeds the track, in such case the brakeman will make the cut to clear the adjoining tracks; after the cut is made switchman will signal the engineer as to further movements and will secure the head portion of the train after doubling over—the rear and swing brakemen will set sufficient number of brakes on rear end of train to properly secure same.

c. On westward trains pulling into the Midway swing brakeman will make the cut at Midway links and will tie down that portion of the train above such links; switchman will double over the head portion, tie down such portion and cut off the engine. On trains arriving in the New Classification yard brakeman will set a sufficient number of brakes on the head end of the train to properly secure same and cut engine off.

110. All trains will hold main track at Saugus if there are no superior trains overdue, except Eastward extras, which will in all cases head in at initial switch.

111. That portion of Santa Paula Branch line at Saugus between crossover switches west of Station and east of water tank, will be used as siding by first-class trains only.

112. Trains taking siding at Whitewater will keep to the right, westward trains using first track from main and eastward trains second track from main.

Inside switches at approaching end of siding must be left lined accordingly.

113. Hayes derailer has been installed in back storage track BEAUMONT, 300 ft. west of east switch. Helper crews eating at BEAUMONT, will leave their engine between these switches and line derailing switch to derail before absenting themselves from engine.

Normal position of derailing switch will be "Not to derail." Switch to be left in that position when track not occupied by engines.

114. With the exception of those noted below, switches on Alameda St. are unsafe for operation of road engine on account of excessive curvature:

San Fernando St.: Crossover at College St.

Alameda St.: Eastbound conn. at Naud Jct.
Westbound conn. at Naud Jct.
West leg wye conn. 7th and Alameda Coach Yd.
East leg wye conn. 7th and Alameda Coach Yd.
Crossover from west to eastbound at west side of 8th St.
Crossover at Washington St. from eastbound to westbound, leading to Salt Lake conn.
Salt Lake conn. at Washington St. near Clement Jct.
